

Come to the

University of Rhode Island Planetarium

on Friday, April 14th, 2017

at 6:00 P.M.

to see

Star Signs Comes to the University of Rhode Island Planetarium

There has always been the joke about the line “What’s your sign?” to introduce yourself to others. But what exactly does that mean? What sign are they talking about?

The University of Rhode Island Planetarium is going back in time to one of the very early presentations created by Evans and Sutherland producers to show a program never-before seen in our planetarium and to show how the technology has changed in the planetarium profession in just a few short years. Star Signs was one of the first shows to use the all-sky format, now so prevalent in today’s facilities, but its science is still perfect. Come and enjoy one of the earliest of the full dome presentations.

This program, for the general audience, will be preceded by a short program,

Losing the Dark

on light trespass, and then will be followed by a live presentation of

The Sky above the URI campus

an introduction to the night sky.

Admission is only \$5.00, to benefit the University of Rhode Island memorial fund.

The University of Rhode Island Planetarium is located on Upper College Road, on the Kingston campus, across from 95 Upper College, the former University Club.

The University of Rhode Island Planetarium is available for programs of many varied topics of astronomical interest for all age levels. For more information please call 401-527-5558.
